

About me

I'm a backend developer. I'm starting to work as a freelancer. I'm looking for missions localized in Paris, I can also work remotely. I describe myself as a Java and Nodejs developer which are my favorite languages, however I can also do some fullstack development with React as frontend tool.

Backend Developer

Job experiences

December 2022

Universign

Backend developer as a Freelancer

Backend development for a signature solution. We used modern technics like hexagonal architecture, DDD, trunk based development and continuous integration with backward compatible API to keep downtime at 0%.

Java 8 ■ Rest doc ■ Spring ■ Mongo Db ■ Maven

September 2022

triPica

Backend developer under permanent contract

Backend development for a real-time utilities/telcos BSS platform with a cutting edge stack with microservices architecture, AWS server and continuous integration. One quarter of my time was devops activity for debug and fix production issues. The company has a very good quality of code and a short time to market.

After had acquiring a new contract, I was in charge to migrate the customer base from their old system to ours until production went live.

Java 17 ■ Open api V3 ■ Spring ■ Hibernate ■ Maven

March 2021

Sopra Steria

Backend developer under permanent contract

Backend development for a master data management system. This system was used as the central piece of one of the biggest information system in France.

The information system was so huge that so we have to evoluate in SAFe agile methodology

EBX5 ■ Java 8 ■ Swagger V2 ■ Spring ■ Maven ■ Hibernate

Projects

Now

Grid trading bot

The bot is based on the idea of the grid trading. The grid trading is a strategy of trading which aim to take profit of high variation of the price. When the price raise by X% the bot sell, and if the price has a X% drop, it buys.

I also used this project to develop my skills with nestjs framework, typescript and to develop from scratch a microservice architecture. This bot is running on a VPS using my real money so the security part of it is also very important.

nestjs ■ MongoDB ■ Nodejs ■ Mexc exchange interfacing ■ Discordjs

February 2022

Front run trading bot

A bot who make profit by front run big transactions. This robot uses the front run strategy, also known as the sandwich strategy. I wrote an [article](#) to find out more.

This project helps me to deep dive into the behavior of blockchain with the mempool containing the pending transactions or how the gas fee work.

Web3.js ■ Nodejs ■ MongoDB ■ solidity
